

**FUTURE
NETWORK**

Network and Cooperation Platform
for ICT Decision Makers
in Business and Research

- ▶ Who we are
- ▶ What we want to achieve
- ▶ Why it's well worth participating

What is the Future Network?

The Future Network is a neutral platform for decision makers in business and research with a focus on IT themes. Since 1997, when the Future Network was founded, we have connected technology and business for future-oriented, practical everyday applications. Based on the specific knowledge of more than 1000 experts, the Future Network connects application-oriented research and user experience. Moreover, the Future Network Cert offers certifications in the fields of Requirements Engineering and Software Architecture.

What are our aims?

As a neutral forum, we discuss trends in information technology and social as well as commercial opportunities and challenges. We are convinced that researchers, experts and users can learn from one another. At our online and live events, decision-makers meet providers of IT solutions, scientists and users in order to select essential knowledge, to utilise it for their own business success and to find partnerships.

Why is it well worth participating?

Our members benefit from maintaining personal contact with research institutes, top-level enterprises and colleagues from their lines of business. We provide strategic cutting-edge knowledge. Our international network gives you an overview of trending technology and market developments as a basis for your decisions. Become a member and take an active role in the selection of topics, address your target group, gain new business partners and help to shape joint events!

Whom will you meet at the Future Network?

- IT decision-makers and CIOs
- IT architects
- Company managers
- Business analysts and requirements engineers
- Data analysts
- Digital officers
- Developers
- R&D experts
- ICT marketers and business developers, product owners
- IT strategy managers and technology managers
- Project managers
- Security managers
- Risk & compliance managers

Our services

A networking platform

We connect education, research and businesses through personal conversations and direct exchange with experts and users. To date, over 700 theme-specific events have focused on target groups such as: IT decision makers, process managers, finance and controlling managers, marketing and sales managers, developers, project managers for IT strategy, security, compliance, new technologies as well as personnel managers and lawyers.

Info talks

provide an opportunity to learn about trending business topics, cutting-edge technologies and developments in applied research.

Round table discussions and management forums

are held in an exclusive setting, each for a specific target group. The focus of these events is the presentation of studies and analyses by top international consultants. Every year, the highlight is the overview of the domestic IT market provided by PAC market research, presented in cooperation with the Economic Research Institute.

Workshops and case studies

convey knowledge and skills on the implementation of technologies for efficient applications and for corporate organisation.

Study trips

As a member, you'll have the special opportunity to look behind the scenes at companies and experience trend research and applications at first hand.

The Future Network Journal

Our newsletter provides follow-up reports on events as well as literature and research tips to members and customers.

The Future Network Web

In order to keep you up to date at all times, our exclusive web service features comprehensive information on focal themes as well as opportunities for online dialogue and networking.

Extensive archive of papers

Via the Future Network website, you will have free access to our comprehensive archive of papers, offering you information on topics, IT market data and events that you may have missed.

Certification centre

Certifications as a proof of qualification: Since 2007, Future Network Cert has functioned as an international certification centre for Certified Professionals for Requirements Engineering – CPRE and for Certified Professionals for Software Architecture – CPSA.

What is unique about the Future Network?

What is the benefit for partners and members in being part of this network?

Here are the testimonials of members and partners:

“The Future Network is a well-proven platform to bring people with similar interests together and provide a suitable setting for further exchange with interesting people.”

Prof. Clemens Cap, *Chair of Information and Communication Services, University of Rostock, Germany*

“The events also provide an informal setting in which participants talk to the top-level speakers directly and exchange opinions. This makes for a successful combination of expert knowledge from various fields and an appealing range of IT subjects covered.”

Peter Kieseberg, *Lecturer at St. Pölten University of Applied Sciences (FH), Head of Research Institute of IT Security Research, Head of Josef Ressel Center for Blockchain Technologies and Security Management*

“Its focus on themes, cross-sectoral applications and the extensive network of renowned organisations are USPs for Future Network in Austria. There is a clearly defined benefit for members: the opportunity for networking and exchanging views on topical themes, technological trends and studies.”

Dr. Klaus Pirklbauer, *CEO Austrian Blockchain Center*

“There is a strong emphasis on personal contact among members through regular meetings. The network connects major representatives of businesses, research centres and universities in the IT sector, thus promoting an important professional dialogue. The Future Network is like a treasure chest filled with productive ideas, inspirations and cooperation projects. The events give our Software Competence Center at Hagenberg opportunities to present cutting-edge research topics and project outcomes, which also helps to make the Center better known.”

Markus Manz, *CEO at Software Competence Center Hagenberg*

“The Future Network is unique in Austria. It brings together a wide variety of ICT players in a forum that goes far beyond the usual dialogue among suppliers and users. The Future Network links scientific experts with industry associations and representatives of interest groups, independent consultants and start-ups. This approach is ideally suited for the actual challenges and opportunities of digitalisation that we are facing today.”

Salomé Wagner, *Sparx Services CE and Member of the Administrative Board of the Austrian crafts and trades association ÖGV*

“Through its events, the Future Network provides an ideal platform for businesses, experts and scientists, often in informal settings. Especially in the field of IT security, this is a basic prerequisite for jointly meeting the challenges of our times.”

Michael Strametz, *Site Director for Austria, SySS Cyber Security*

New Technologies and Business Models — Current Focal Topics of the Future Network

Digital Transformation

Flexible infrastructures, cloud computing and edge computing, machine-to-machine communication and a growing “as a service” economy: digital transformation is multifaceted and concerns our society as a whole. According to the Capgemini Survey on IT Trends in 2021, IT enables business despite restrictions on contact: 87% of businesses and authorities have further expanded their digitalisation strategies during the COVID-19 pandemic. Digitalisation is the top priority for 2021.

Hybrid workspace

The workspace of the future has become a present-day reality: during the pandemic, those companies whose staff worked from home and could render services contactlessly have managed to maintain or even increase their turnover. Collaboration tools facilitate cooperation even for geographically scattered teams – with new challenges for innovative projects and business processes in organisations.

Secure systems

The security of infrastructures and product safety has become a key challenge of our times. Whether production safety and security, threats posed by IoT-enabled devices, or ransomware attacks on company networks: resilience and data protection are the mainstays of a functioning economy and society, increasingly supported by modelling tools and cybersecurity management systems as well as blockchain solutions.

Smart technologies

Ranging from the simplification of manual work by means of Robotic Process Automation to Artificial Intelligence, autonomous systems will bring the greatest transformation for humankind in the coming years. What are the opportunities and challenges caused by this development – on the economic, societal, ethical and legal level? According to Capgemini, AI systems will require specific IT architectures with powerful networks in order to process large data volumes at high speed.

New job profiles

The digital world requires new job profiles. Occupational images in IT are set to change massively in the years to come. Businesses as well as providers of education and training should prepare in advance for the new requirements and offer study programmes for data scientists, systems architects and AI trainers. In addition to sound technical knowledge, data scientists will need to have a high degree of coordination and communication skills, as well as a great deal of creativity.

Capgemini: Survey on IT trends 2021

IT makes business possible despite restrictions on contact

Technology investment and aims

At the time of the survey, in September and October 2020, the economic prospects were uncertain due to the Covid-19 pandemic. In such a situation, one would expect companies to make severe budget cuts. However, only around 15 per cent of the participating companies have in fact reduced their IT expenses, which corresponds approximately to last year's level. A larger proportion of respondents (around 27 per cent) have frozen their IT budgets. 48.4 per cent are increasing their IT expenses, compared to 63.1 per cent last year.

Occasioned by the pandemic, 87 per cent of businesses

and public authorities have expanded digitalisation. Moreover, CIOs seem to be focusing more on adapting their IT to the needs of the end customers. Data security, improved analysis and use of data, shorter release cycles and the creation of partner networks are also gaining importance, whereas flexibility and efficiency are viewed as being less significant.

On average, almost 47 per cent of all IT expenditure is used for the maintenance of systems. CIOs spend around 27 per cent of the IT budget on modernisations and some 26 per cent on developing and implementing innovations. These figures correspond approximately to the level of three years ago.

**How important will the following topics be for your business in the next few years?
What is the current stage of development of your projects in these fields?**

Basis: IT decision makers (n = 87)

■ Importance in the next few years (100 = very important, 1 = of no importance at all)
● In operation (percentage) ● Being planned, or implementation underway (percentage)

Source: Capgemini, IT Trends Survey 2021

Smart technologies

On average, the use of smart technologies has slightly risen over the past 12 months.

The priorities as to the areas of use are similar to last year's, with automation of manual tasks still in the lead. However, all the responding CIOs view the value of the individual measures for users more critically than other decision makers in the business.

Technological trends

This year, the participants attach the greatest importance to production safety and security, predictive analytics, protection against threats posed by IoT-enabled devices, DevOps and Robotic Process Automation (RPA) without AI support. Least important are chatbots, voice control, virtual assistants, virtual and augmented reality applications, blockchain technologies and mobile wallets.

Cloud and data

Data provide the basis for smart technologies. Data platforms are integrated technology solutions that make it possible to manage and access information from various sources and make it available to users, applications or other technologies. As a data platform is, to a certain

extent, a prerequisite for business-wide digitalisation, its use has become increasingly widespread. At present, more than two thirds of the respondents operate a data platform and, as a rule, view it as a strategic component of their IT infrastructure.

Data exchange is increasing in every area

Moreover, as data platforms have become increasingly easy to build and operate, the acceptance and dissemination of interface standards is growing. The result is a higher volume of data exchange, which has risen enormously within the companies' own supply chains this year. Obviously, closely interconnected supply chains offer great potential for businesses, such as the possibility of exchanging information on the availability of goods or coordinating delivery times. The exchange of data with supervisory authorities has also risen markedly. As one would expect, the proportion of businesses making use of this possibility is highest among providers of financial services, at over 90 per cent.

Companies should continue to invest in building platforms and utilising the data that they yield. As the quality of AI services of cloud providers continues to improve, businesses with adequate datasets will be able to use smart technologies ever more easily and in ever more areas.

Social media activities

Positioning one's company as an expert has even higher priority than recognition

What is your aim and what are the tasks delivered by your social media activities?

Basis: All surveyed marketing/communication managers and CEOs who use social media applications (n = see diagram). Multiple answers possible.

Cooperation partners

Austrian Institute of Technology. As Austria's largest non-university research institution operating ten centres and subsidiaries, the Austrian Institute of Technology makes a major contribution in terms of strengthening the technological knowledge base of Austria's economy and thus helping to secure its business locations in the face of international competition.

BITSeN.ch — Among service providers, the model of comprehensive service is increasingly catching on. IT organisations can learn from this model and, conversely, providers of all kinds of services can benefit from the means and methods of IT. Therefore, at our forum events we welcome ever more speakers who show how service management can be successfully implemented in routine processes.

Become a Future Network partner

As a Future Network partner, you'll have the opportunity to reach IT decision-makers as well as new potential customers and business partners. You'll be able to present your expertise to an audience of IT professionals, exchange experiences with peers at our Trend Talks, Business Breakfasts, Brunches or Meetings. Moreover, you'll benefit from our marketing activities via social networks and newsletters. We will support you in successfully establishing your position as a player in the DACH area (Germany, Austria and Switzerland).

Please contact us to schedule an appointment for discussing the details in person!

APPLICATION FOR MEMBERSHIP		To: Future Network — Association for the Promotion of Networking in Information Technology Kaiserstrasse 14/2 1070 Vienna, Austria		phone: +43 / 1 / 522 36 36-37 fax: +43 / 1 / 522 36 36-10 office@future-network.at www.future-network.at
<input type="checkbox"/> I would like to become member of the Future Network and hereby apply for acceptance as a member in the following category:		Company		
ANNUAL MEMBERSHIP FEES: (valid from November 2002)		Title		
Company memberships:		First name		
<input type="checkbox"/> User companies with up to 10 employees . € 370.00		Family name		
<input type="checkbox"/> User companies and software developers with up to 50 employees: € 740.00		Job title		
<input type="checkbox"/> User companies with over 50 employees: . € 1,110.00		Address		
<input type="checkbox"/> System providers and software developers with over 50 employees: € 1,480.00		ZIP / postal code		
Sponsoring memberships (financial donation):		City		
<input type="checkbox"/> by agreement with the Board, but at least: € 1,850.00		Phone		
<input type="checkbox"/> Members of the Advisory Board as well as software developers and system providers, at least: € 3,700.00		Fax		
Membership of public corporations:		E-mail address		
<input type="checkbox"/> Educational institutions, universities etc.: . € 370.00		City, date		
<input type="checkbox"/> Public corporations with less than 100 employees: € 740.00		Signature		
<input type="checkbox"/> Public corporations with 100 or more employees: € 1,110.00		<input type="checkbox"/> I agree that the above information is managed electronically and that my name or company name will be published in the Membership Directory. <input type="checkbox"/> I do not want to be named in the Membership Directory (on request please tick).		
Personal membership:		<input type="checkbox"/> I do not want to be a member, but would like more information and regular program submissions.		
<input type="checkbox"/> Individual membership: € 75.00				
<input type="checkbox"/> Student membership (on submission of valid confirmation of enrolment): € 37.00				
Termination of membership must be carried out by means of a written declaration addressed to the Board, by giving 3 months' notice to the end of a calendar year.
